Psychopathology & the birth of Psychotherapy

Part 2: Towards 'Mental Illness'

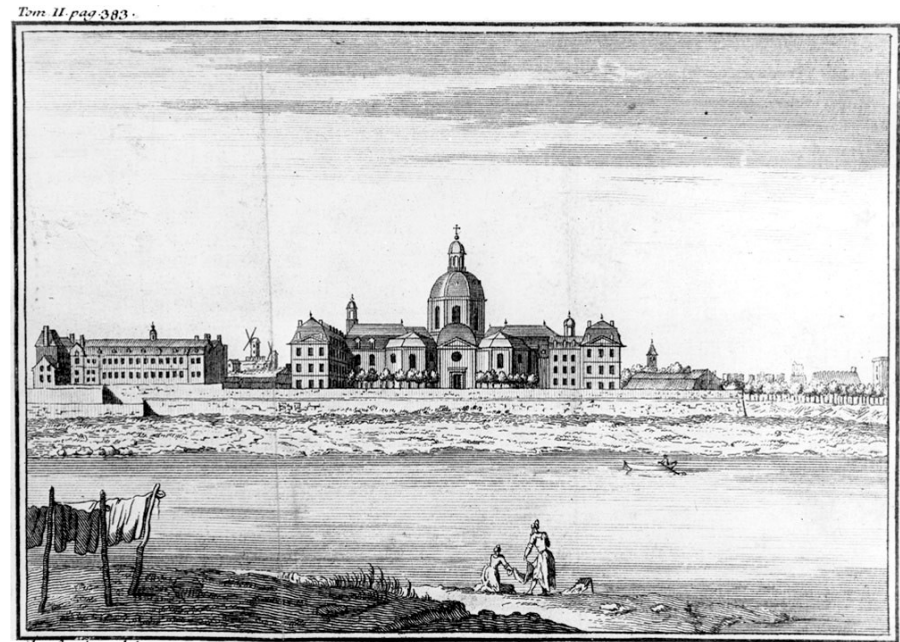

A/Prof Simon Boag

email: simon.boag@sydney.edu.au

Towards 'mental illness'

- 17thC.: Belief in demonic possession decreasing
- 18thC.: a shift toward seeing the insane as 'ill' rather than 'evil'
- **Disease model: mental illness**
- cf. Paradigm shift
- *Insane viewed as degenerate*
- Solution: Incarceration
- 16th C. 'Lunatic asylums'
- 'Human zoos'

Chauvignier del

L'HOPITAL DE LA SALPETRIERE.

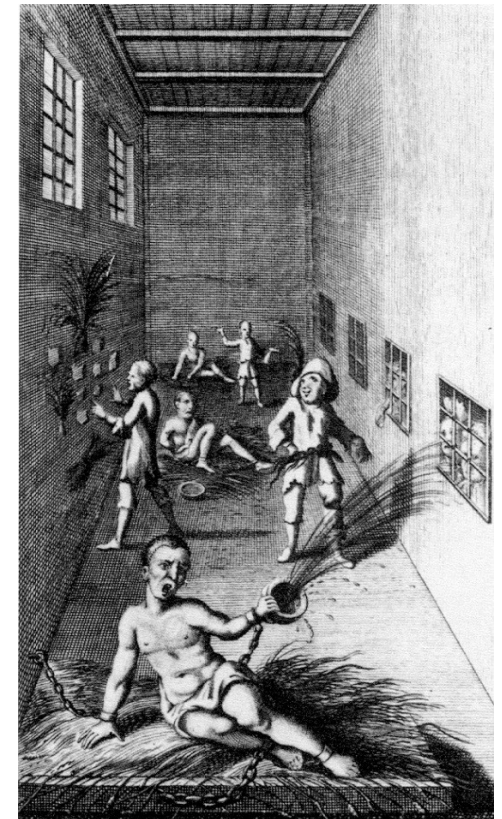

Asylums & incarceration

THE UNIVERSITY OF
SYDNEY

Mentally ill often incarcerated with criminals

“Most inmates were institutionalised against their will, lived in filth & chained to walls, & were commonly exhibited to the public for a fee. Mental illness was nonetheless viewed somatogenically, so treatments were similar for physical illnesses: purges, bleedings, & emetics” (Farreras, 2019)

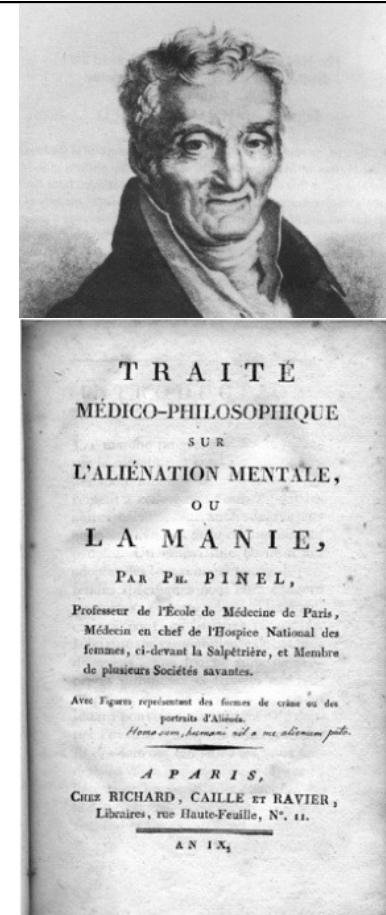

Philippe Pinel (1745-1826)

THE UNIVERSITY OF
SYDNEY

1793: *Asylum de Bicêtre*: Pinel removes inmates' chains

- Later takes charge of *La Salpêtrière* in Paris
- 'Moral treatment'
- Establishes study & medical care of the insane
- Development of 'humane attitude' towards mentally ill (O'Neil, 1967)

Somatogenic causes of mental illness

Benjamin Rush (1745-1813)

- ‘Father’ of US Psychiatry
- *Medical Inquiries & Observations upon the Diseases of the Mind* (1812)
- All mental illness followed from irritation of blood vessels in the brain
- Treatment: Physical therapies

eg. tranquilizer chair; gyrator; hydrotherapy; spinning; purging; bleeding

"Surprise Bath" used in colonial times to "restore the distracted to their senses." Original wood engraving by John De Pol.

to restore them to their senses

Less than 200 years ago, the mentally ill were bled, purged, beaten and sometimes nearly drowned in efforts to restore them to their senses.

The treatment of mental illness has progressed far beyond methods such as these. One of the major advances in psychiatry has come through chemotherapy—now an important factor in the treatment of mental illness, pioneered and developed with 'Thorazine'.

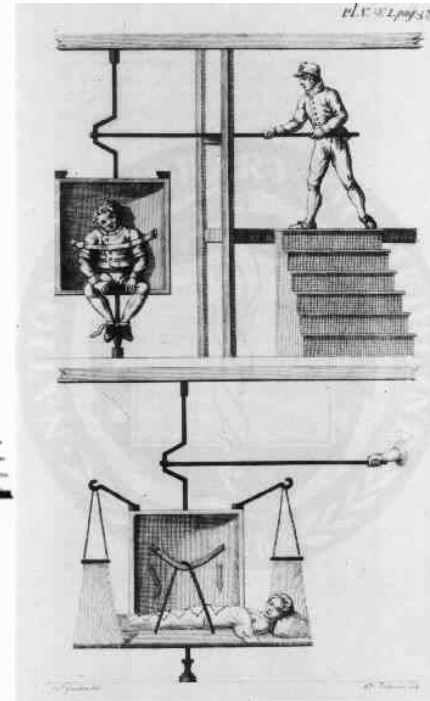

The importance of 'Thorazine' in psychiatry is twofold: (1) its continued widespread use has established it as a fundamental drug that can be used with confidence, and (2) it has led S.K.F. to the development of related drugs which offer the psychiatrist opportunities to help an even greater number of patients.

THORAZINE*

chlorpromazine, S.K.F.

 Smith Kline & French Laboratories

*T.M. Reg. U.S. Pat. Off.

Dorothea Dix & the Mental Hygiene movement

Dorothea Dix (1802-1887)

- A teacher appalled by asylum conditions
- **Mental Hygiene Movement: 40-year long campaign to reform asylums & introduce proper care**
- 'Moral treatment' (from Pinel)
- Influenced 20 US states to improve conditions
- Oversaw opening of 2 institutions in Canada
- Also influenced asylum reform in Scotland

Emil Kraepelin (1855-1927)

Systematic classification of mental disease

- **Forms basis of modern taxonomy** eg.
- *Disorders of infection* (fever delirium)
- *Intoxication disorders*
- *Dementia praecox*
- *Organic dementias*
- *Psychopathy* ('moral insanity')
- *Manic depression*
- *Defective mental development* (eg. 'idiocy')
- **Comparative Psychiatry (1904)**

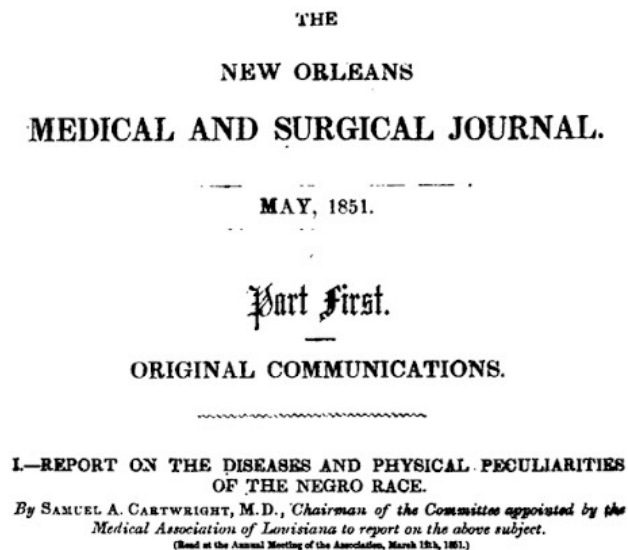

Medicalisation & the disease model

Samuel Cartwright (1793-1863)

- *Diseases & Peculiarities of the Negro race* (1851)

Drapetomania

- Symptom: running away
 - Cause: mental disease
 - Prevention: flogging
-
- *A disorder of the person or a disorder of the society?*
